Imaging studies ordered: Full-Body Scan via Med-Bot	
Follow-up instructions: Use prescriptions as advised until next visit. If symptoms begin to show, return immediately.	
Next appointment: 04/29/2076	

Diagnosis and treatment

1. Early signs of kidney stone development was observed. The patient's overall hydration estimate: 62%. This led MB-C-X to prescribe a twice daily electrolyte blend.

2. Major signs of sleep dysfunction were observed. The patient was observed to have an estimated sleep wellness of 38%, with 3 major markers out of range. 1: eye lid position 2: digestion rate 3: slowed nerve conduction. With these markers, MB-C-X prescribed a sleep booster.

Notes

MB-C-X observed 4 biometrics out of range during its scan, leading it to 2 separate diagnosies. Patient is to return in 1 week to ensure markers have returned to regulations.
